Political Subdivison Splits Between Districts

Sunday, December 4, 2022

8:31 AM

Split Counts

Number of subdivisions split into more than one district: Number of splits involving no population:

County	68	County	0
Voting District	193	Voting District	23

Number of times a subdivision is split into multiple districts:

County	209
Voting District	200

County	Voting District	District	Population

Split Counts

Number of subdivisions split into more than one district: Number of splits involving no population:

County	69	County	0
Voting District	184	Voting District	16

Number of times a subdivision is split into multiple districts:

County	209
Voting District	195

County	Voting District	District	Population

EXHIBIT B

Exhibit B – Methodology and Sources

1. In the preparation of this report, I analyzed population and geographic data from the Decennial Census and the American Community Survey.

2. For my redistricting analysis, I used a geographic information system (GIS) software package called *Maptitude for Redistricting*, developed by the Caliper Corporation. This software is deployed by many local and state governing bodies across the country for redistricting and other types of demographic analysis.

3. The geographic boundary files that I used with *Maptitude* are created from the U.S. Census 1990-2020 TIGER (Topologically Integrated Geographic Encoding and Referencing) files.

4. I used population data from the 1990-2020 PL 94-171 data files published by the U.S. Census Bureau. The PL 94-171 dataset is published in electronic format and is the complete count population file designed by the Census Bureau for use in legislative redistricting. The file contains basic race and ethnicity data on the total population and voting-age population found in units of Census geography such as states, counties, municipalities, townships, reservations, school districts, census tracts, census block groups, precincts (called voting districts or “VTDs” by the Census Bureau) and census blocks.

5. I obtained and used 2020 block-level disaggregated citizenship data (2015-2019 ACS and 2016-2020 ACS) from the Redistricting Data Hub via <https://redistrictingdatahub.org/>

6. The attorneys for the plaintiffs provided me with incumbent addresses.

7. For my analysis, I also relied on shapefiles for current and historical legislative plans available on the website of the Legislative and Congressional Reapportionment Office.

8. In addition, I obtained shapefiles for the House, Senate, and Congressional plans in effect during the early 2000's from the American Redistricting Project.

<https://thearp.org/blog/map-archive/>

9. I developed the illustrative plans presented in this report using *Maptitude for Redistricting*. The *Maptitude for Redistricting* software processes the TIGER files to produce a map for display on a computer screen. The software also merges demographic data from the PL 94-171 files to match the relevant decennial Census geography.

10. I also reviewed and used data from the American Community Survey ("ACS") conducted by the Census Bureau – specifically, the 1-year 2021 ACS, the 5-year 2015-2019 ACS, and the 5-year 2016-2020 ACS Special Tabulation of citizen population and voting age population by race and ethnicity (prepared by the

Census Bureau for the U.S. Department of Justice) and available from the link below:

<https://www.census.gov/programs-surveys/decennial-census/about/voting-rights/cvap.html>

EXHIBIT C

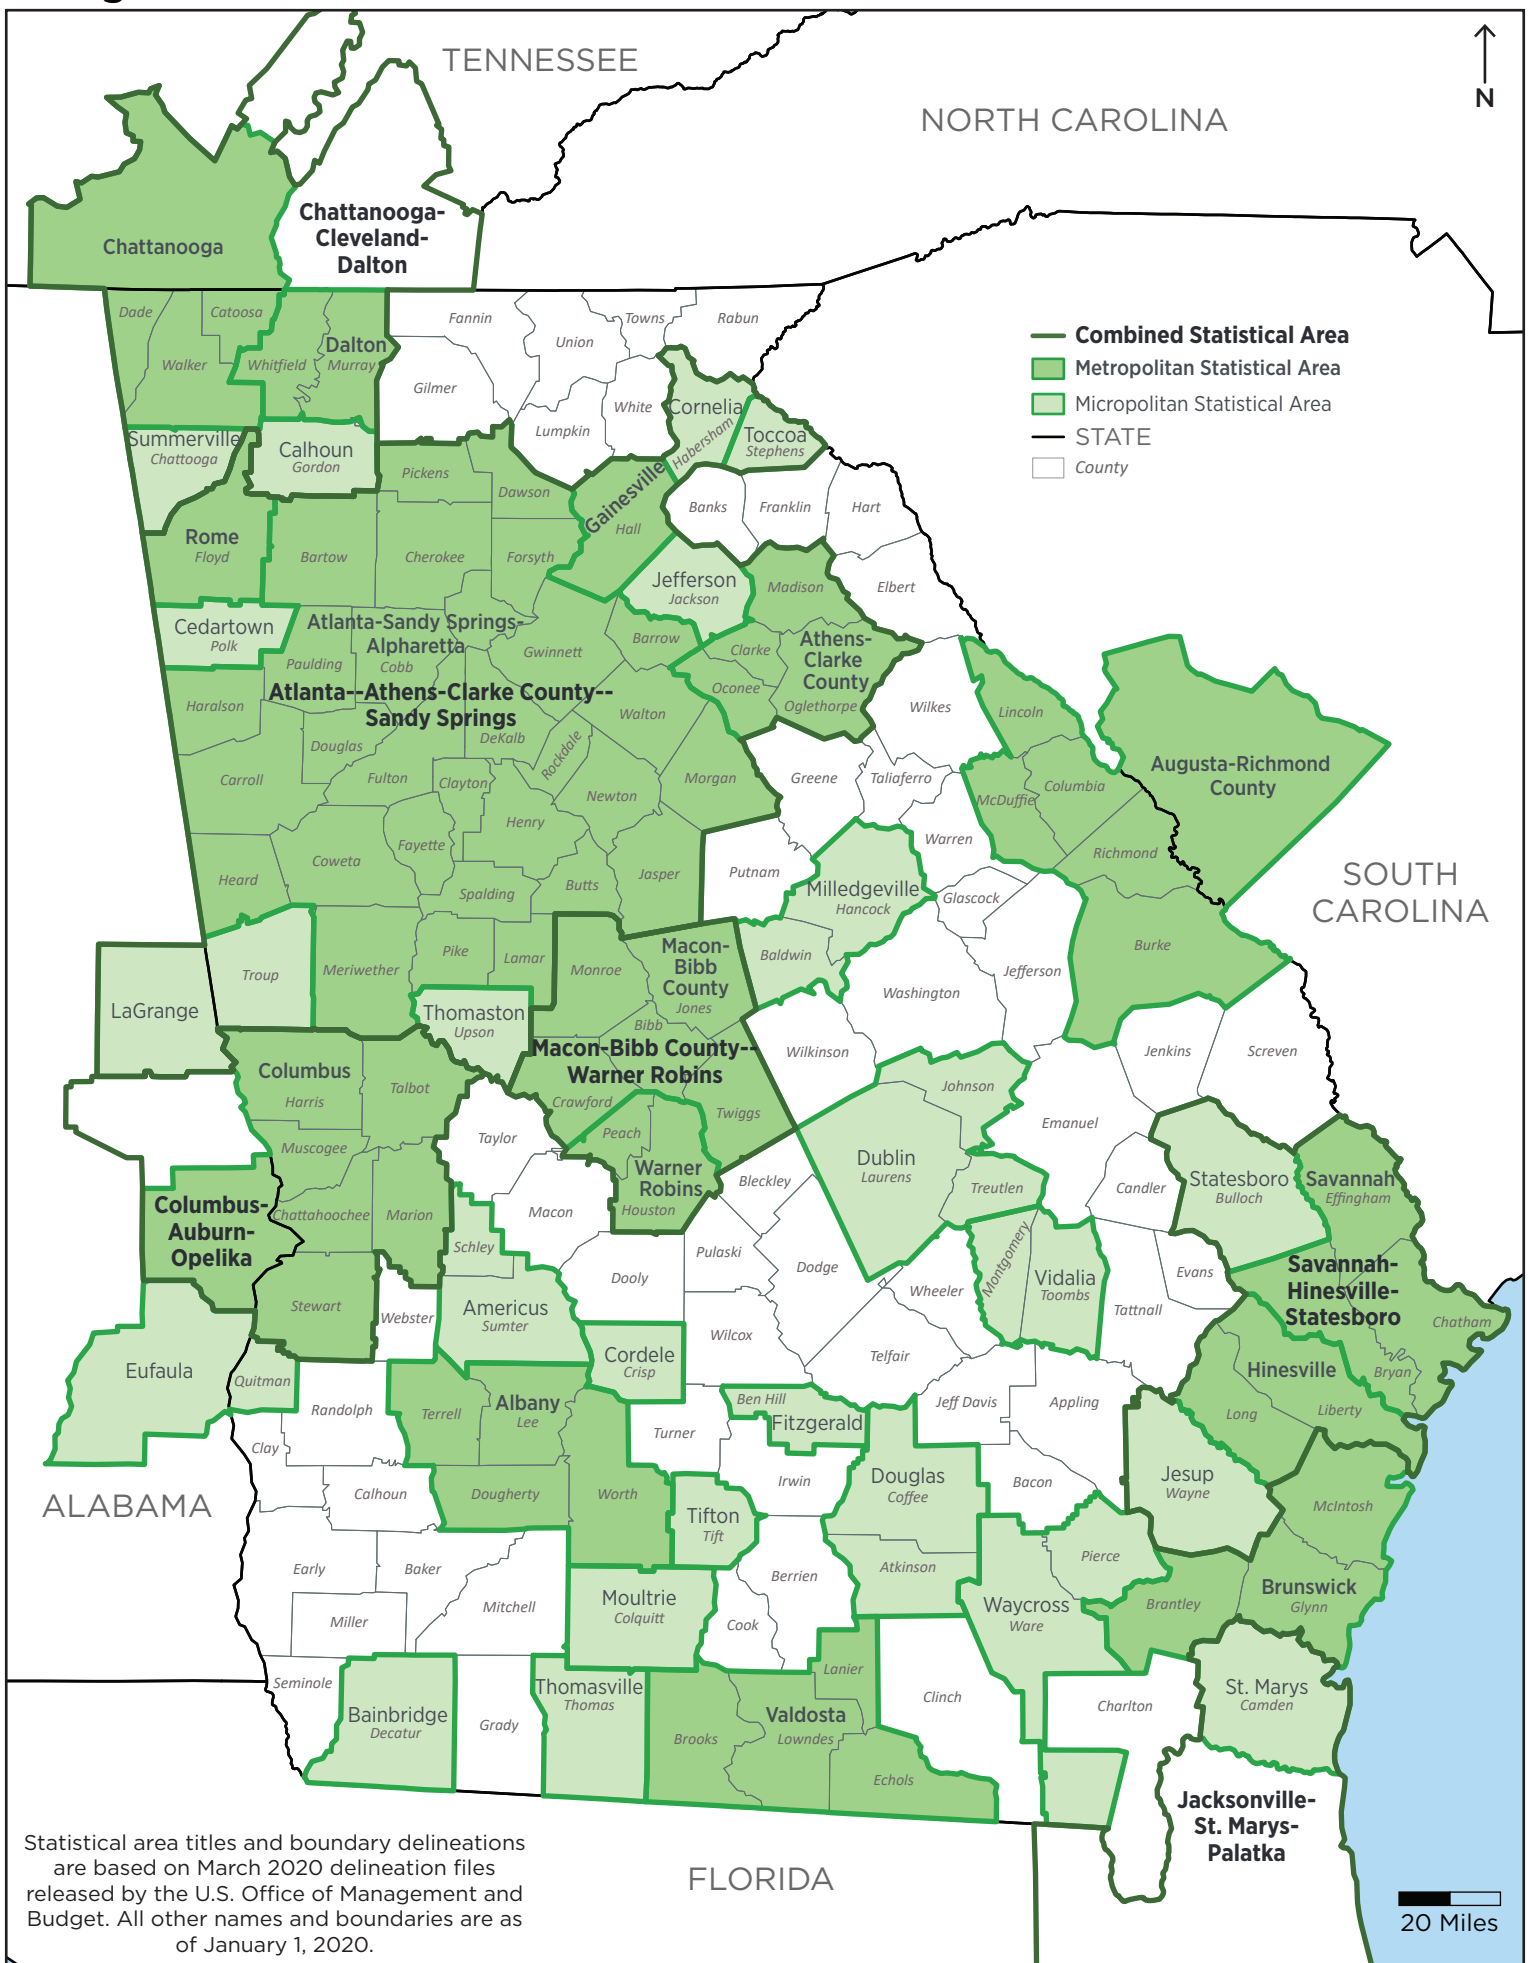

EXHIBIT D

Appendix A: Sample Selection

This analysis relied on three measures to select the Black Belt school systems: historical data of enslaved labor, current enrollments of Black students and current enrollments of students living in poverty. School systems were considered if they had one of the following criteria: a majority-Black student population, majority of students living in poverty and a history of enslaved labor. Enslaved labor data is based on the 1860 U.S. Census data of the distribution of enslaved populations. A review of the data showed a normal distribution of enslaved people as a portion of the population except for a dip in the number of counties with 30 to 39 percent enslaved. The following chart displays the drop in enslaved populations and the subsequent increase in the number of counties that held 40 to 49 percent enslaved people.

This sharp increase of counties and cities that contained more than 40 percent of their population enslaved made for a natural threshold for this analysis. This analysis considered all school systems that currently operate in an area that previously had enslaved people greater than 40 percent of the population as having a history of slavery.

School systems that met two of the criteria were included in the selection. Of the remaining systems, the current enrollment had to exceed 30 percent Black and 30

POLICY REPORT

percent living in poverty. This threshold made it possible that even if the school system were not majority Black, Black students might represent a plurality of the student body. Metro Atlanta school systems were excluded due to the unique challenges and opportunities that come with educating in the region. A table with the data is below, with Black Belt districts highlighted.

System Name	Slave Population (1860)	Percent Black (2018)	Percent in Poverty (2018)

Source: Institute of Taxation and Economic Policy, February 2019; "Who Pays? A Distributional Analysis of the Tax Systems in All 50 States," Institute on Taxation and Economic Policy, October 2018

Appendix B: Methods

This analysis focuses on K-12 public education funding and outcomes as a measure of the state's responsibility to its citizens. Schools operate in a complex environment of federal and state laws and local district decisions. The state constitution outlines the ultimate responsibility for public education, however.

For decades school finance experts studied state funding systems by comparing inputs, or investments, meaning that two similar students, regardless of the location of their schools, should be provided similar funding amounts.⁴⁷ Additionally, if there were notable differences between students that affected the school program each would require, then different funding amounts might also be required. It is for this very reason that students with disabilities are provided more funding than students without disabilities.⁴⁸ This focus on inputs led to the *McDaniel* case mentioned in the report's timeline. The *McDaniel* case was a primary driver for state policymakers to draft and pass the Quality Basic Education Act, an overhaul to the state's education funding formula, in 1985.⁴⁹

More recently, education finance has been analyzed through outputs, or outcomes. Instead of solely judging a funding system by the amount of money provided, states have been held accountable for the level of student performance.⁵⁰ The question no longer stops at whether funding amounts are equal, but whether they are adequate to produce high levels of learning for students across the state. This analysis considers various inputs such as staffing, budgets and educational opportunities, but the focus remains on outputs.

Population Summary

Summary Statistics:

Population Range:	189,320 to 193,163
Ratio Range:	0.02
Absolute Range:	-1,964 to 1,879
Absolute Overall Range:	3,843
Relative Range:	-1.03% to 0.98%
Relative Overall Range:	2.01%
Absolute Mean Deviation:	1,012.61
Relative Mean Deviation:	0.53%
Standard Deviation:	1,154.96
